Malnutrition Universal Screening Tool (MUST)

Optimal nutrition is meant to prevent deterioration of mental and physical functions as well as health or treatment complications and to shorten convalescence. The purpose of the «Malnutrition Universal Screening Tool» (MUST) is to detect existing malnutrition mainly in the outpatient setting, but also in nursing homes and hospitals. The implementation of the MUST is recommended by the «European Society for Clinical Nutrition and Metabolism» (ESPEN) for outpatients [1].

Body Mass Index
○ > 20 kg/m²   ○ 18.5 - 20 kg/m² (+1)   ○ < 18.5 kg/m² (+2)
Unplanned weight loss in the past 3–6 months
○ < 5 %   ○ 5 - 10 % (+1)   ○ > 10 % (+2)
Acutely ill patient with food abstinence > 5 days (also expected)
○ No   ○ Yes (+2)

Interpretation

Points	Risk	Recommendation
0	Low risk for malnutrition	**Repeat Screening:** - Hospital: weekly - Nursing home: monthly - Practice: annually for risk groups (e. g. age > 75 years)
1	Moderate risk for malnutrition	**Observe:** - Nutrition protocol over 3 days (hospital and nursing home) Repeat Screening: - Hospital: weekly - Nursing home: monthly - Practice: every 2–3 months
? 2	High risk for malnutrition	**Treat:** - Begin nutrition therapy Review of therapy: - Hospital: weekly - Nursing home: monthly - Practice: monthly
